Dallas, USA | +1 (469) 955-4740 | Puspamitra.mishra@gmail.com | linkedin.com/in/puspamitra-mishra-6b186b29

PROFESSIONAL SUMMARY

Strategic, forward-looking Senior Engineering Leader with over 24 years of enterprise IT experience driving massive digital transformations, cloud migrations, and high-throughput API modernization. Expert in leading and scaling large cross-functional global engineering organizations, managing distributed teams of 350+ engineers across North America and India. Adept at bridging deep architectural foundations with high-level executive delivery to optimize organizational capability, maximize developer velocity, and engineer substantial cost reductions—including multi-million dollar annual licensing and infrastructure savings. Deeply literate in the modern AI and Generative AI ecosystem, spearheading enterprise adoption of LLMs, agentic workflows, and automated governance to build next-generation software delivery pipelines.

CORE COMPETENCIES & STRATEGIC LEADERSHIP

• Executive Leadership & Scale:	Global Org Management (350+ staff), End-to-End Enterprise Delivery, Cross-Functional Alignment, Talent Development, Change Management
• Enterprise Cloud & FinOps Architecture:	Multi-Cloud Strategy (AWS, Azure, GCP), High-Throughput & Low-Latency API Gateways (Kong, APIC, APIGEE), Cloud Spend Optimization
• AI & Generative AI Ecosystem:	Agentic Workflows (LangChain, LangGraph, CrewAI), Claude, OpenAI, LLMOps, AI-Powered Legacy Modernization, GitHub Copilot Integration
• Modern Engineering & Observability:	Microservices Architecture (Spring Boot, Node.js), Event-Driven Platforms (Kafka), Enterprise Observability (Datadog, Grafana, Kibana, Prometheus)

SELECTED EXECUTIVE ACCOMPLISHMENTS

- **Multi-Million Dollar Cloud Spend Optimization:** Governed the end-to-end cloud-to-cloud migration of massive business applications from GCP to Azure, managing an baseline monthly run-rate of \$1.2M to \$1.5M in compute, storage, networking, and tooling costs. Secured a zero-cost, vendor-managed migration roadmap from Microsoft that achieved an ongoing infrastructure spend optimization of ~\$500K per month (\$6M annualized).
- **Legacy Modernization & Platform Optimization:** Championed the core architectural transformation of a legacy IBM Integration Platform to cloud-native Java microservices on Azure. Completely eliminated annual IBM ACE licensing costs (~\$1M/year saved) and slashed maintenance overhead by 30% by establishing automated CI/CD quality pipelines and reducing support footprint.
- **Strategic Gateway Modernization:** Directing the ongoing enterprise-wide migration of the APIC integration platform onto the modern Kong Gateway, significantly reducing corporate Total Cost of Ownership (TCO) and boosting API gateway performance.
- **Generative AI & Developer Velocity:** Built and executed a groundbreaking proof-of-concept leveraging GitHub Copilot and advanced Generative AI frameworks (LangChain, LangGraph, CrewAI) to automate legacy ESQL code translation into modern cloud-native microservices, vastly accelerating developer velocity.

PROFESSIONAL EXPERIENCE

Senior Engineering Leader – API Platform Modernization | CVS Health / Aetna / McKesson (via TCS) **Aug 2024 – Present**

- Provide executive-level ownership over the architecture, security, resiliency, and performance of enterprise-scale integration platforms (APIC, APIGEE, Kong) across Azure and Google Cloud Platform (GCP).
- Direct high-throughput, low-latency API architectures handling millions of mission-critical business transactions daily.
- Lead the strategic migration of the legacy APIC platform to Kong Gateway to optimize operational efficiency and minimize enterprise TCO.
- Establish comprehensive multi-cloud migration roadmaps and deployment pipelines in tight alignment with the CISO, infrastructure, and Solution Architecture teams.
- Govern full-stack platform observability leveraging Datadog, Prometheus, Grafana, and Kibana to ensure 99.99% system availability and accelerated incident resolution.

Senior Engineering Leader – Legacy Modernization & AI Integration | MetLife (via TCS) **Mar 2021 – Jul 2024**

- Scaled leadership to manage a massive cross-functional engineering organization of 350+ developers and architects distributed across North America and India.
- Directed the high-stakes cloud-to-cloud migration of large business applications running an active monthly spend of \$1.2M to \$1.5M across compute, storage, networking, and tooling on GCP over to Azure.
- Drove systematic architecture optimization by identifying non-performing cloud items, decoupling legacy infrastructure dependencies, and redesigning scaling configurations to capture a \$500K/month (\$6M/year) run-rate reduction financed entirely by Microsoft via a zero-cost program.
- Successfully modernization legacy IBM Integration Platforms to modern Azure microservices architectures, completely offsetting the licensing costs for IBM ACE (~\$1M/year saved).
- Slashed long-term maintenance overhead by 30% and minimized engineering support headcount requirements by establishing fully automated Azure DevOps CI/CD pipelines and optimized quality gates.
- Architected and integrated cutting-edge AI and Generative AI frameworks, incorporating Claude, OpenAI (GPTs), LangChain, LangGraph, and CrewAI into enterprise systems to establish intelligent agentic workflows.
- Designed AI-driven test data generation and quality engineering frameworks to introduce high-velocity shift-left testing within automated regression suites.

Senior Engineering Manager – Cloud Migration & Microservices | Citigroup (via TCS) **Feb 2017 – Feb 2021**

- Led the distributed migration of a monolithic, legacy Java-based core banking platform into a modern Spring Boot microservices ecosystem deployed across Pivotal Cloud Foundry (PCF), AWS, and OpenShift.
- Established rigorous engineering best practices, driving code review standards, microservices design patterns, and high-performance API design standards.
- Governed comprehensive end-to-end release planning, automated production deployments, and provided Tier 3 engineering oversight for business-critical payment and checkout applications.

Solutions Architect / Senior Developer | Citibank (via TCS) **Dec 2005 – Oct 2017**

- Directed engineering groups of 35-50 developers to successfully design and execute high-stakes banking and mortgage platform integrations, notably the Citi / ABN Amro global integration.
- Architected and implemented an innovative Java/XML-based Decision Rules Engine for Mortgage Underwriting, including a sandboxed testing framework that empowered business units to safely simulate rules pre-deployment.
- Modernized and migrated legacy corporate Fees & Pricing engines into a scalable, decoupled, service-oriented architecture supporting multiple distinct banking platforms.

EDUCATION & PROFESSIONAL CREDENTIALS

- **Bachelor of Engineering (B.E.) in Electronics & Telecommunication Engineering** | Utkal University, India
- Claud Certified Architect – Professional (2026)
- TCS - Generative AI Executive Level Certification (2025)
- AWS Certified Solutions Architect – Associate (2024)
- Sun Certified Programmer for the Java Platform (SCJP - SE 5.0)
